Variables

$s = $_GET['s']
Include the header of the website.

$blq = "SELECT * FROM book WHERE b_nm LIKE '%$s%'"

$blres = mysql_query($blq, $link)
Execute the query.

while ($blrow=mysql_fetch_assoc($blres))
Include the footer of the website.

Detailed Description

Book search results page.

This script displays the search results based on the user input. It fetches books from the database that match the search query and displays them in a structured format.

Variable Documentation

◆ $s

$s = $_GET['s']

Include the header of the website.

Include database connection. Get the search term from the query string.
